Fractions Matter! Pain and excessive pressure on your horse's back and shoulders causes fatigue, inhibits ground gaining strides, and makes it much more difficult for your horse to regain balance after landing. Â

For the Horse: The Xcelerator helps your horse Recover Balance Quicker after landing so you save time, and your horse saves energy! Our 100% pure wool flocking and our specially designed handmade laminated birch wood trees are calibrated to provide just the right amount of torsional and vertical flexion to dampen those forces to relieve pain and minimize pressure.

For the Rider: The Xcelerator's uniquely designed seat-to-leg flap relationship results in a much more stable leg and upper body, allowing the rider to remain perfectly balanced and to effortlessly get out of the tack and into the irons. And you will be amazed how much easier it is to let your horse out and bring him back under your seat on the lightest aids.

So, if you want more horse under you during cross country and as you enter stadium, you need an Xcelerator under you as well.

Advanced Design/Traditional Quality !

Laminated birch wood trees (NO SYNTHETICS!), 100% pure wool flocking (NO SYNTHETICS!).
